

Radiant Skin, Radiant You

A progressive approach to improving your skin condition

Restylane
SKINBOOSTERS™

Dull, tired skin: It's a common concern

From pollution to diet to stress, modern life can take a toll on your skin, damaging its soft, radiant appearance. Frequent concerns include:

- Noticing that your skin has become rough or uneven over time
- Missing the plumpness and radiance of hydrated skin
- Feeling that your skin has lost elasticity, and looks tired and worn
- Wishing that you could reduce the appearance of skin imperfections, such as acne scars or photo damage

Thankfully, a long-lasting solution to improving your skin's condition is close at hand: Restylane® Skinboosters™, a progressive treatment to improve your natural radiance.

Restylane Skinboosters: An innovative treatment that improves your skin condition

It is only natural to want skin that looks and feels soft and radiant. Restylane Skinboosters is clinically proven to:

- Increase skin elasticity and give you firmer skin^{3-6,8}
- Smooth and soften skin^{4,6,8}
- Reduce fine lines⁵
- Lessen imperfections, such as acne scars¹

This is due to Restylane's unique NASHA™** technology, a patented technique for creating stabilized Hyaluronic Acid (HA). HA is a natural ingredient found in the skin designed to maintain hydration in the skin. The Restylane Skinboosters injectable gel delivers significant improvements in skin quality for up to 12 months^{4,5}, depending on the treatment area - far longer than the non-stabilized HA used by the majority of other brands.

Patients love the results they see from Restylane Skinboosters. After a course of treatments:

- Patients see a vast improvement in satisfaction with the glow of their skin¹

Restylane Skinboosters is a product of Galderma, a leader and pioneer in skin health. At Galderma, your safety is our priority. We have built our expertise in the skin with our range of products, with over 20 years of clinical experience and safety follow up, and over 30 million treatments worldwide with our Restylane range.⁹

Restylane
SKINBOOSTERS™

*Non-Animal Stabilized Hyaluronic Acid

Progressive treatment means natural-looking, long lasting results

We all know that patience is a virtue. When it comes to your Restylane Skinboosters treatment, results are progressive: this means that changes in skin condition are subtle and natural-looking, and usually aren't apparent immediately after the first treatment. But the improvements to your skin condition last well beyond your trips to the clinic – for up to 12 months after the initial treatment:^{4,5}

- Injections are typically administered over the course of 3 treatment sessions, 2–4 weeks apart*, to restore your skin's elasticity and smoothness in a gradual way
- Regular maintenance sessions (approximately every 6 months) occur as planned with your practitioner ensuring lasting results

Clinical studies prove the lasting impact of a Restylane Skinboosters treatment with improvement in skin elasticity of the face and hands for up to 12 months after the initial treatment.^{4,5}

Increase in skin elasticity

Kelly's Story

A Restylane Skinboosters patient shares her experience

"Before trying Restylane Skinboosters, I had never done an injectable treatment of this type - but I had been told what the treatment could do and was very hopeful that I would see some of these results for myself!

My practitioner explained that the results would appear over time, and that I would continue to see improvement even after my third treatment. I couldn't wait to get started.

The procedure itself was better than I expected. It wasn't too painful; I felt just a few small pinpricks, and my practitioner was very gentle. I loved that I could go back to my normal, everyday activities right after treatment.

I really started to notice a difference after my second treatment. My skin started to glow, and felt so much fresher. I could feel that the structure of my skin had improved as well, and my face felt softer. I also had fewer fine lines around my cheeks and mouth.

I am so pleased with the results of my Restylane Skinboosters treatment that I would recommend it to any of my friends. The results are subtle and natural-looking but everyone tells me I look refreshed and that my skin is radiant. I can see and feel the same effects myself, and I feel younger! The treatment has even made a difference to me on the inside - I feel happier, and I feel good about myself.

All thanks to Restylane Skinboosters!"

FAQs

WHAT ARE RESTYLANE SKINBOOSTERS?

Restylane Skinboosters are an innovative treatment to improve your skin condition, especially designed to deliver deep skin hydration and lasting improvements to the overall quality of the skin. This means increasing hydration levels within the skin to deliver a healthy radiance and provide improvements to the skin's surface.

HOW DOES THE TREATMENT WORK?

Each treatment involves a series of hydrating microinjections of long-lasting hyaluronic acid, also called stabilised HA, a water-loving substance found naturally in the body that maintains hydration in the skin. Stabilised HA is a soft, gel-like substance that absorbs water and brings deep skin hydration to the treated areas, giving it improved firmness, elasticity and smoothness. This manifests outwardly as a wonderful, healthy radiance. Only a trained practitioner should administer the microinjections.

IS THE TREATMENT SAFE?

The Restylane range has been extensively investigated. Restylane has been used in over 30 million aesthetic treatments worldwide and trusted for two decades.

WHAT AREAS MAY BENEFIT FROM RESTYLANE SKINBOOSTERS?

Areas that may be treated include:

- Face
- Neck
- Hands
- Décolletage
- Acne Scars or photo-damaged skin

WHAT MAKES RESTYLANE SKINBOOSTERS DIFFERENT FROM OTHER TREATMENTS?

Traditional skin care products applied on the skin surface can easily be washed away, while Restylane Skinboosters hold water deep in the dermal layer for lasting hydration and improvements to skin elasticity and smoothness.

CAN RESTYLANE SKINBOOSTERS BE COMBINED WITH OTHER AESTHETIC SKIN TREATMENTS?

Yes. Restylane Skinboosters represent a versatile treatment choice. They may be used alone or alongside other aesthetic treatments. Restylane Skinboosters are often used as a first line treatment to progressively improve skin quality before other aesthetic treatments.

HOW MANY TREATMENT SESSIONS WILL I NEED?

For optimal results, advise the patient to receive:

- One start-up course, usually 3 treatment sessions, 2-4 weeks apart
- Regular maintenance sessions, approximately every 6 months

WILL I SEE RESULTS IMMEDIATELY?

Results are progressive: this means that changes in skin condition are subtle and natural-looking, and usually aren't apparent immediately after the first treatment. The improvements to your skin condition last well beyond your trips to the clinic - for up to 12 months after the initial treatment.

HOW LONG DOES THE TREATMENT TAKE?

A treatment with Restylane Skinboosters does not take long. Depending on the area and indication, it takes approximately 15-45 minutes.

Restylane
SKINBOOSTERS™

Restylane Skinboosters: an injectable therapy you can trust

- It refreshes dull skin and corrects imperfections to restore your natural radiance.
- It offers you subtle, progressive results and long-lasting effects
- It is supported by clinically proven outcomes, from a leading name in skin rejuvenation

When you're ready to experience long lasting improvement to your skin's condition, ask your practitioner about Restylane Skinboosters.

Restylane Skinboosters: Radiant Skin, Radiant You!

The reactions mentioned in this document are based on a patient's own experiences and may not be what others will experience. As for all injection treatments using hyaluronic acid, side effects may occur in association with treatment. These side effects are usually mild to moderate, and include transient reactions such as redness, pain, swelling, bruising and/or bumps at the injection sites. Please consult your practitioner for additional information.
